BPS[®] C2-2^{evo}[®]

Outstanding Performance
meets compact size

G+D's class-leading tabletop banknote processing systems continue to evolve with the new generation BPS C2-2^{evo}, designed to deliver reliable efficiency in a compact footprint. It processes daily cash volumes with improved efficiency and cost-effectiveness, featuring an enhanced singler capable of handling all substrates and banknote qualities, along with an optimized transport path that supports smooth, dependable operation.

With two output compartments, the BPS C2-2^{evo} supports essential sorting options, such as denomination, orientation, and fitness, allowing operators to complete core tasks efficiently in a single pass. A maximum throughput of up to 1,200 banknotes per minute, enabled by dynamic singling, helps increase productivity while maintaining accuracy. Best-in-class sensors ensure reliable authentication and fitness detection, while the intuitive new GUI, with optional GUI mounting, makes operation simple and easy to learn.

The new generation BPS C2-2^{evo} is ideal for commercial banks, CITs, casinos, and other organizations seeking dependable performance and efficiency in a compact system.

A new look and updated performance, the same reliability

Maximum efficiency

The BPS C^{evo} offers extensive processing options for a user-tailored operating experience. With the optional Config Optimizer, operators can easily adjust system configurations to streamline workflows and optimize banknote sorting. Intuitive light guidance and newly structured, clear menus support fast, confident operation.

Enhanced security

Security is a top priority in today's cash-handling environment. The BPS C^{evo} runs on a resilient Linux-based software platform, recognized for its stability and security. Encrypted communication protocols protect sensitive data, while intelligent automated processes reduce operator interaction and minimize the risk of human error or fraudulent interference.

Superior performance with unmatched flexibility

A high-performance processor accelerates processing and enables quick menu navigation with shorter reaction times. Drawing on years of global field

experience across all substrates and banknote qualities, the optimized singler and transport path significantly reduce jams and rejects, resulting in higher, more consistent throughput.

Future proof

Your business demands efficient processes and systems that evolve with changing requirements. The BPS C^{evo} provides the scalability and flexibility needed to meet today's operational needs while remaining ready for future challenges.

1,200

banknotes per minute

The BPS C2-2^{evo} delivers high throughput in a compact footprint, enabling teams to process daily cash volumes efficiently while keeping operations simple.

TECH FACTS

Speed:

1,050 BN/min

Dynamic singling:

(depending on banknote format)
up to 1,200 BN/min

BN formats (length x width):

100–181 x 60–85 mm

Multi-currency:

up to 40 currencies

Mixed currency:

up to 10 currencies

Singler capacity:

(depending on BN quality)
up to 1,000 BN

Output compartment capacity:

(depending on BN quality)
up to 250 BN

Reject compartment capacity:

(depending on BN quality)
up to 100 BN

Dimensions (H x W x D):

51 x 33 x 39 cm

Weight:

~ 27 kg

Temperature range:

15°C – 35°C

Electrical specifications:

100–240 VA, 50/60 Hz

External connections:

1 x LAN, 4 x USB host,
1 x USB device

Certificates:

CE, GS, CB
